
Vacant position : **Automation Engineer**

(ref. JO-104)

About us

exense GmbH is a software publisher and services company which specializes in Scalable Automation, Performance Engineering, Service Monitoring and Analytics. We operate in France, Germany and Switzerland and are a human-size, bootstrapped startup looking to deliver high-quality products to our clients. As an open-core company, we are firm believers in the open-source philosophy but we also believe in an open-minded workplace. We do our best to provide a dynamic, yet comfortable and ethical work environment for our employees.

About this position

As a versatile Automation Engineer, you will use modern tools (Docker, Kubernetes, Selenium, Puppeteer) and solid software stacks (such as Java 8/9, AngularJS, MongoDB) to help build, maintain and operate automation software (see <http://step.exense.ch>). You will address a large variety of problems and perform complex tasks such as:

- developing automation artefacts and contributing to open-source & EE projects
- deploying and customizing automation farms for customers
- operating our own cloud-based automation clusters and analyzing technical issues
- integrating automation in various workflows and environments (such as CI/CD)

About you

You're a sincere, responsible, curious and dedicated person. When faced with a problem, you like to persevere until you understand it and if possible, fix it. We hope you have a basic understanding of an OOP language (Java or .NET a +) and of a dynamic language (JS a +). Ideally, you've built something on your own that you'd like to show us. You speak and write English properly. Good communication skills in general are plus. German is a plus.

Work conditions

Work hours are pretty flexible and we try to adapt to every individual situation. You get 5 weeks of paid holidays per year. You can work one or two days remotely per week. You'll be spending about half of your time working directly on client projects. The rest depends on your own inclinations and desire, as well as R&D goals we have to work on at that moment.

Compensation

Competitive Swiss salary & benefits, influenced by individual profile. Frequent reevaluation.
